SUMMARY

Python Developer with commercial experience in web scraping and current professional experience as a Python Instructor. Experienced in building data-driven applications, backend services, and interactive analytics dashboards using Django, FastAPI, Dash, and Pandas. Focused on writing clean, maintainable code and delivering data-driven solutions.

TECHNICAL SKILLS

Languages: Python, SQL
Backend: Django, Django REST Framework, FastAPI, SQLAlchemy, Pydantic, JWT Authentication
Data Analysis: Pandas, Dash, Plotly
Web Scraping: BeautifulSoup, Scrapy, Selenium, Requests
Databases: PostgreSQL, SQLite
AI Integration: Google Gemini API, Ollama
Tools: Git, Docker, Docker Compose, Alembic, Render

PROFESSIONAL EXPERIENCE

- Python Instructor

2026 – Present

 - Teach Python programming to beginner and intermediate students.
 - Explain OOP, algorithms, debugging, and core programming concepts.
 - Create practical coding assignments and review students' solutions.
 - Help students build real Python projects and improve problem-solving skills.
- Freelance Python Developer (Web Scraping)

2026 (3 months)

 - Developed web scrapers using BeautifulSoup, Selenium, Scrapy, and Requests.
 - Automated data collection from multiple websites.
 - Processed and cleaned collected data for further analysis.
 - Exported datasets to CSV and JSON formats.
 - Maintained scraping scripts when website structures changed.

FEATURED PROJECTS

- Amazon Product Analytics Dashboard — Python, Dash, Plotly, Pandas, VADER, TF-IDF

 - Built a full-stack analytics dashboard analyzing 1,464 Amazon products and 1,736 customer reviews, with 14 interactive visualizations covering price, category, and rating trends.
 - Implemented sentiment analysis on customer reviews using VADER to surface positive, negative, and neutral feedback patterns.
 - Applied TF-IDF keyword extraction to identify the terms and topics most associated with product reviews.
 - Added dynamic filtering (product, category, price range, rating) so users can drill into the data interactively.
 - Deployed the application on Render with a responsive interface for public access.

Portfolio (Live Demo): <https://amazon-product-analytics-dashboard.onrender.com> | GitHub: <https://github.com/YaYaYaroslav/Amazon-Product-Analytics-Dashboard>
- Job Board Platform — Django

 - Developed a Django job board with role-based accounts for employers and job seekers.
 - Implemented job posting, search, filtering, and application submission with resumes and cover letters.
 - Built an application tracking workflow and a scalable database structure for companies, skills, categories, and locations.

EDUCATION

- Zhytomyr Polytechnic State University — Software Engineering

ADDITIONAL EDUCATION

- Mate Academy — Python Course (OOP, Django)
- Self-study through technical books and personal projects
